SUMMARY

Turning ambiguous, low-adoption systems into structured platforms that ship and get used

10+ years across enterprise and startup B2B SaaS environments

Lead 0→1 builds and product turnarounds in complex, constraint-heavy settings

EXPERIENCE

Director of Product · **Advertease** · Remote

2023 – Present

Title reflects sole ownership of product function at an early-stage startup; scope aligns with Senior PM at larger organizations.

Five-product creator monetization and hospitality-tech suite. Owned full product function — roadmap, delivery, stakeholder alignment, and engineering coordination — across 6 client engagements under tight runway constraint.

- Built the full product function from scratch at a zero-PM startup, imposing structure across roadmap planning, sprint cadence, backlog grooming, and cross-functional alignment across 5 products simultaneously.
- Identified behavioral failure risk pre-launch and designed a structured alpha program with 20 creators to stress-test onboarding and publishing workflows before client exposure — surfacing friction before it reached the anchor client.
- Collapsed fragmented content architecture into a unified Post model supporting video, image, text, and polls — reducing creator cognitive load, unifying fan discovery into a single feed, and cutting long-term technical surface area.
- Shipped a viable creator monetization platform under a 4-month runway constraint to a 35-venue enterprise anchor client, securing formal acceptance and stabilizing the business for an additional two years of operation.
- Led blockchain payment system integration planning for a creator tipping and subscription model, navigating regulatory complexity across payments and digital assets.
- Managed cross-functional team of 2–4 engineers and up to 6 ops/QA using Kanban-based sprint planning and Jira Product Discovery across a multi-product delivery pipeline.
- Owned mobile membership application deployed across 12 venue locations for access control, payments, and customer tracking.

Product Lead · **Duabile Brand Trust** · Remote

2018 – 2022

Retained as lead product consultant across 12+ client engagements spanning B2B SaaS, fintech, nonprofit, and small business sectors.

- Led 0→1 discovery and requirements definition for 5 platform builds — translating ambiguous business goals into PRDs, roadmaps, and executable technical specs across regulated and unregulated industries.
- Built performance and analytics frameworks across 7 products, converting traffic and behavioral data into strategic reporting that surfaced UX friction and informed roadmap prioritization.
- Defined governance and delivery standards across 12 engagements, owning engineering handoff specs and hands-on oversight of usability and information architecture.
- Provided ongoing product strategy and digital advisory for nonprofit and small business clients, including voicesfromtheopiodcrisis.com for The Zach Project, a 501(c)(3) substance awareness organization.

Product Manager · **Marsh & McLennan Companies** · New York, NY

2013 – 2018

Owned product strategy and delivery for a broker-facing decision-support platform and two-sided marketplace serving 170+ global insurers and 60,000+ users across 15 countries.

- Scaled voluntary platform adoption from 8% to 86% across 30,000+ global brokers — largest active internal user base of any application across the enterprise, achieved without mandates.

- Secured executive funding and delivered an industry-first two-sided marketplace inside a Fortune 500 with no prior internal software development history, navigating waterfall governance, compliance-regulated approval cycles, and global stakeholder complexity.
- Designed and shipped a patent-pending recommendation engine using historical placement data across 170+ insurers — replacing broker guesswork with structured, data-informed decision support and reducing cognitive load in client advisory conversations.
- Reframed the product from a static content repository to an embedded workflow tool by identifying broker decision insertion points through structured discovery interviews across dozens of brokers and internal roles.
- Engineered phased adoption sequencing: acquired and personalized professional news content to drive daily platform habit before introducing the recommendation layer — converting a behaviorally irrelevant portal into a decision-support destination.
- Introduced agile delivery patterns inside a waterfall enterprise by partnering with Oliver Wyman's software practice as a governance-compatible bridge — enabling iterative delivery without triggering compliance rejection.
- Defined data classification hierarchy and translated insurer-facing analytics into broker-facing workflows, language, and UI — bridging a significant data architecture gap between existing tools and the new platform.
- Built proof-of-value reporting infrastructure for 170+ insurer clients — providing defensible ROI evidence tied to placement behavior, not vanity metrics.
- Supported global rollout across 15 countries; led customer success for 70+ North American enterprise clients and supported 100+ additional global accounts across 20+ markets.

EARLY DIGITAL CAREER

Prior to moving into product management, built a foundation in digital content strategy, web publishing, and audience systems across a range of organizations — from enterprise to early-stage startup.

Content Strategist & Web Producer · ADP 2013

- Built an intranet/extranet web presence for an internal real estate services team — owned information architecture, content workflows, and stakeholder requirements from brief to launch.

Copywriter & Content Strategist · Toys R Us / Babies R Us 2012

- Produced digital content and managed publishing workflows for one of the largest US retail brands; contracted via Robert Half Technology.

Content Manager · RoastE.com 2011 – 2012

- Owned content strategy and editorial operations at an early-stage specialty e-commerce startup — managed publishing pipeline, audience growth, and content taxonomy.

Content Producer · Innodata 2010 – 2011

- Produced and structured digital content at scale for a global information services company; developed early fluency in content architecture and metadata standards.

SKILLS & COMPETENCIES

Product Management: Product Strategy · Roadmap Prioritization · 0→1 Product Development · Agile/Scrum · Sprint Planning · Backlog Grooming · User Stories · Acceptance Criteria · Go-to-Market · KPIs & Success Metrics · Usability Testing · A/B Testing · Adoption & Retention · Stakeholder Management · Executive Communication

Domain Expertise: Platform Products · Two-Sided Marketplaces · Recommendation Systems · Decision-Support Systems · Enterprise SaaS · B2B SaaS · Fintech & Financial Services · Workflow Design · Data Modeling · APIs & Integrations · Behavioral Product Design · Regulated Environments

AI & Automation: ML-informed recommendation engines (patent-pending) · AI-assisted synthesis and drafting workflows · Prompt engineering · Automation strategy

Tools: Jira · Jira Product Discovery · Confluence · Figma · Adobe Experience Manager (AEM) · Google Analytics · Adobe Analytics · Claude · ChatGPT

EDUCATION

Bachelor of Arts, English · William Paterson University of New Jersey
